

Belal Mohamed Elsayed Ali

Flutter Developer | Mobile Engineer | Cross-Platform Specialist

belalagwa0@gmail.com • +201069225923 • Zagazig, Egypt • linkedin.com/in/belalmohameddev • github.com/belalMohamedDev

PROFESSIONAL SUMMARY

Flutter Developer with 4+ years of experience building and deploying 3 production applications on both Google Play and the App Store. Specializes in Clean Architecture, Bloc/Cubit state management, and Firebase integration for high-performance cross-platform apps. Proven track record of measurable impact: reduced API response latency by 25–35% and checkout times by ~30% through optimized networking, caching, and state management. Currently contributing as a part-time team member on a live Saudi Arabia e-commerce platform. Open to remote and international opportunities.

PROFESSIONAL EXPERIENCE

Flutter Developer (Part-time) | اشهار التسويقية — Go Tawfeer App

Oct 2025 – Present

Remote | Saudi Arabia

- Serve as a core team member on the GoTawfeer e-commerce platform, collaborating with backend engineers in a professional remote environment.
- Led development of key product features — product browsing, cart management, and full checkout flow — improving UX across Android and iOS.
- Designed and integrated scalable REST APIs in collaboration with backend engineers, ensuring reliable data flow and error resilience.
- Optimized app performance across multiple device types, reducing UI jank and improving responsiveness for production users.
- Contributed to production deployment releases on both the App Store and Google Play.

Flutter Developer | Self-Employed (Freelance)

Jan 2022 – Present

Sharqia, Egypt | 3 production apps live on Google Play & App Store

- Architected, developed, and published 3 production-grade Flutter apps (Forrira, GoTawfeer, Sweetna) serving real users, managing the full lifecycle from UI/UX to Node.js backend integration.
- Reduced API response latency by 25–35% in Forrira (multi-vendor delivery app) through optimized Dio networking, request caching, and token refresh interceptors.
- Decreased checkout time by ~30% in GoTawfeer (e-commerce app) by streamlining Bloc state management and parallel API call execution.
- Implemented real-time order tracking using Firebase Cloud Messaging (FCM) and Google Maps SDK, delivering live driver-to-customer location updates.
- Integrated complete Firebase suite (Auth, Firestore, Cloud Messaging, Storage, Crashlytics) for authentication, data persistence, push notifications, and crash reporting.
- Applied Clean Architecture and Repository Pattern to produce a maintainable, testable, and scalable codebase across all projects.

Flutter Developer Intern | Technique Company

Jul 2021 – Dec 2021

Zagazig, Egypt

- Delivered end-to-end mobile features within an Agile team, integrating the full Firebase suite (Auth, Firestore, Cloud Messaging).
- Implemented Bloc state management architecture, reducing code complexity by 30% and improving feature maintainability.
- Built responsive, pixel-perfect UIs and profiled performance bottlenecks using Flutter DevTools.

KEY PROJECTS

Forrira — Multi-Vendor Delivery App — iOS & Android (Live)

- Engineered a multi-role delivery system (customer, driver, vendor) with real-time order tracking and live GPS-based driver location.
- Achieved 25–35% API latency reduction via optimized Dio networking, caching strategies, and retry logic with token refresh.
- Integrated Node.js backend with scalable architecture to support concurrent multi-vendor operations.

App Store: apps.apple.com/us/app/foorira • Play Store: play.google.com/store/apps/details?id=com.foorira.newusersapp

GoTawfeer — E-Commerce Application — iOS & Android (Live)

- Built a full-scale e-commerce experience (authentication, product catalog, cart, checkout, order history) using Clean Architecture and Bloc.
- Cut checkout time by ~30% by optimizing API call flow and implementing efficient state transitions.
- Integrated Dio with token refresh and retry logic for robust, resilient API communication.

App Store: apps.apple.com/us/app/go-tawfeer • Play Store: play.google.com/store/apps/details?id=belal.agwa.gotawfeer

Sweetna — Dessert Ordering App — Android (Live)

- Developed a complete dessert ordering app with cart, checkout, order management, and multi-language support (Arabic/English).
- Applied Cubit + Clean Architecture for a scalable, maintainable codebase with smooth UX.

Play Store: play.google.com/store/apps/details?id=com.sweetna.app

Finder — AI-Powered Face Recognition App — Graduation Project

- Led development of an AI-based system to identify missing children using face recognition, real-time GPS tracking, and push notifications.
- Built the backend using Node.js and Flask for image processing, face matching pipelines, and secure data storage.

GitHub: github.com/belalMohamedDev/finder

TECHNICAL SKILLS

Languages & Frameworks: Flutter, Dart (Null Safety, Async/Await), Node.js

State Management: Bloc / Cubit, Clean Architecture, Repository Pattern

Networking & APIs: REST API Integration, Dio (Token Refresh & Retry), Retrofit, JSON Parsing

Firebase: Authentication, Firestore, Cloud Messaging (FCM), Storage, Crashlytics

Maps & Real-Time: Google Maps SDK, GPS Services, Real-Time Notifications

Local Storage: Hive, Flutter Secure Storage, Shared Preferences

UI/UX: Custom Widgets, Responsive & Adaptive Layouts, Hero & Lottie Animations

Tools & Practices: Git, Flutter DevTools, Performance Optimization, Debugging, Error Handling

App Deployment: Google Play Store, Apple App Store (iOS & Android)

EDUCATION

Flutter Development Track | **National Telecommunication Institute (NTI)**

Jan 2026 – Present

Advanced Flutter: Bloc, Clean Architecture, API Integration, Production-level practices — Zagazig, Egypt

Bachelor of Computer Science | **Higher Technological Institute**

Jan 2018 – Jan 2022

Focus: Software Development & Mobile Technologies — 10th of Ramadan City, Egypt
