

FLUTTER DEVELOPER

Designing mobile products people love to use.

I build as a **Perfo** |

I am Belal Mohamed, a Flutter engineer focused on polished user experiences, scalable architecture, and measurable app performance gains.

About Me

Hi! I am **Belal Mohamed**, a **Flutter Developer** who loves turning ideas into smooth, beautiful mobile apps. I specialize in crafting high-performance, user-friendly experiences for Android and iOS.

When I am not coding, you will find me exploring modern UI/UX patterns, mentoring junior developers, and experimenting with practical architecture choices that scale.

I thrive on creativity, clean architecture, and building solutions that create clear product impact.

Teamwork

EXPERIENCE

Hands-on product delivery across live mobile apps.

Flutter Developer (Part-time) | اشهار التسويقية - Go Tawfeer App

Oct 2025 - Present | Remote, Saudi Arabia

- Serve as a core team member on the GoTawfeer e-commerce platform, collaborating with backend engineers in a professional remote environment.
- Led development of product browsing, cart management, and full checkout flow, improving UX across Android and iOS.
- Designed and integrated scalable REST APIs with backend engineers, ensuring reliable data flow and error resilience.
- Optimized app performance across multiple device types, reducing UI jank and improving responsiveness for production users.
- Contributed to production deployment releases on both the App Store and Google Play.

Flutter Developer | Self-Employed (Freelance)

Jan 2022 - Present | Sharqia, Egypt | 3 production apps live on Google Play & App Store

- Architected, developed, and published 3 production-grade Flutter apps (Foorira, GoTawfeer, Sweetna), managing the full lifecycle from UI/UX to Node.js backend integration.
- Reduced API response latency by **25-35%** in Foorira through optimized Dio networking, request caching, and token refresh interceptors.
- Decreased checkout time by around **30%** in GoTawfeer by streamlining Bloc state management and parallel API call execution.
- Implemented real-time order tracking using Firebase Cloud Messaging (FCM) and Google Maps SDK, delivering live driver-to-customer location updates.
- Integrated the Firebase suite (Auth, Firestore, FCM, Storage, Crashlytics) for authentication, persistence, notifications, and crash reporting.

- Designed and integrated scalable RESTful microservices, ensuring robust data flow and error handling.
- Optimized app performance across multiple device types, reducing UI jank and improving responsiveness for production users.
- Contributed to production deployment releases on both the App Store and Google Play.

Flutter Developer | Self-Employed (Freelance)

Jan 2022 - Present | Sharqia, Egypt | 3 production apps live on Google Play & App Store

- Architected, developed, and published 3 production-grade Flutter apps (Foorira, GoTawfeer, Sweetna), managing the full lifecycle from UI/UX to Node.js backend integration.
- Reduced API response latency by **25-35%** in Foorira through optimized Dio networking, request caching, and token refresh interceptors.
- Decreased checkout time by around **30%** in GoTawfeer by streamlining Bloc state management and parallel API call execution.
- Implemented real-time order tracking using Firebase Cloud Messaging (FCM) and Google Maps SDK, delivering live driver-to-customer location updates.
- Integrated the Firebase suite (Auth, Firestore, FCM, Storage, Crashlytics) for authentication, persistence, notifications, and crash reporting.
- Applied Clean Architecture and Repository Pattern to maintain a testable, scalable, and maintainable codebase across projects.

Flutter Developer Intern | Technique Company

Jul 2021 - Dec 2021 | Zagazig, Egypt

- Delivered end-to-end mobile features within an Agile team, integrating Firebase Authentication, Firestore, and Cloud Messaging.
- Implemented Bloc architecture, reducing code complexity by around **30%** and improving maintainability.
- Built responsive, pixel-perfect user interfaces and profiled performance bottlenecks using Flutter DevTools.

SERVICES

How I can help your product.

Flutter App Development

End-to-end Flutter apps for Android and iOS with scalable architecture and production-ready quality.

- Cross-platform apps
- Clean Architecture + Bloc/Cubit
- App Store / Play Store release

Node.js Backend Integration

Robust backend integration and API workflows tailored for mobile products and real user traffic.

- REST API design/integration
- Authentication flows
- Error handling and resilience

Firebase Solutions

Complete Firebase setup for authentication, real-time updates, notifications, storage, and monitoring.

- Auth + Firestore + Storage
- FCM push notifications
- Crashlytics analytics

Performance Optimization

Improve startup time, reduce UI jank, and optimize data/network layers for a faster app experience.

- Dio optimization + caching

PROJECTS

Real products shipped with measurable impact.

Foorira

Multi-Vendor Delivery App - iOS & Android (Live)

Flutter

Dio

Node.js

GPS

Multi-role delivery system (customer, driver, vendor) with live order tracking and real-time GPS driver location.

Reduced API latency by **25-35%** using optimized Dio networking, caching, retry logic, and token refresh.

GoTawfeer

E-Commerce Application - iOS & Android (Live)

Flutter

Bloc

Clean Architecture

Dio

Full-scale commerce flow: authentication, catalog, cart, checkout, and order history with resilient API integration.

Improved checkout flow and reduced completion time by around **30%** through optimized

Sweetna

Dessert Ordering App - Android (Live)

Flutter

Cubit

Clean Architecture

Multi-language

Built a complete dessert ordering experience with cart, checkout, and order management in Arabic and English.

Used Cubit + Clean Architecture for scalable code and smooth UX across key purchase journeys.

Finder

AI-Powered Face Recognition App - Graduation Project

Flutter

Node.js

Flask

Face Recognition

Led the development of an AI-based system to identify missing children using face recognition and real-time GPS tracking.

Built backend services for image processing pipelines, face matching, secure storage, and

FEEDBACK

What clients say about working with me.

★★★★★

Belal delivered the GoTawfeer app modules with excellent quality and speed. Checkout experience became smoother, and our team trusted his architecture decisions from day one.

Product Manager - GoTawfeer

E-Commerce Team, Saudi Arabia

★★★★★

Strong ownership and clear communication. He optimized API handling and app responsiveness across different devices, which made a clear impact on user experience.

Technical Lead - Foorira

Delivery Platform Team

★★★★★

From UI details to production release, Belal handled the project professionally. The codebase was clean, scalable, and easy for our team to maintain.

Founder - Sweetna App

Food & Dessert Startup
